Schmallenberg Virus – updated testing results

Quarter Ending 31 March 2013

This table includes additional serology results provided by laboratories at Liverpool University and Scotland's Rural College. Surveillance statistics published by AHVLA have given an indication of the geographical spread of the disease and helped farmers make informed business decisions. As the disease has now been detected in all counties in England and Wales and the enhanced surveillance initiatives ceased in December 2012 the data has become less meaningful. Statistics are now being published on a calendar quarterly basis, and the next set will be published in July 2013. Statistics for Scotland will be published as frequently as is necessary to keep farmers informed of the detection and spread of the disease.

Sheep farmers can complete a brief online survey to gather data that will help build a picture of the lamb crop for 2013. The survey, a joint initiative supported by NSA, AHVLA, Eblex, HCC, NBA, NFU and QMS, should be completed when an individual farm has finished a particular lambing batch and will remain open to late May 2013. The survey can be accessed at: <https://www.surveymonkey.com/s/WWHBNC5>

Farmers should contact their veterinarians if they have concerns and vets should contact their local AHVLA Investigation Centre if they require advice.
