### Schmallenberg Virus – updated testing results for Scotland

#### Period Ending 31 July 2013

This table includes serology results provided by laboratories at Scotland's Rural College. Surveillance statistics published by AHVLA give an indication of the geographical spread of the disease and help farmers make informed business decisions. Statistics for Scotland will be published on a monthly basis, to keep farmers informed of the detection and spread of the disease.

Statistics for England and Wales are now being published on a quarterly basis.

NB: Although results from Scotland are listed by local authority area, cases outside of Dumfries and Galloway, Aberdeenshire and Islay relate to animals introduced into Scotland from areas where Schmallenberg virus has been reported.

Farmers should contact their veterinarians if they have concerns.

Local Authority Area <sup>1</sup>	Cattle			Sheep			Total Serology	Total Fetal
	Serology 2012 <sup>2</sup>	Serology 2013	Fetal 2013	Serology 2012 <sup>2</sup>	Serology 2013	Fetal 2013		
Aberdeenshire	0	3	1	0	1	0	4	1
Argyll and Bute	2	3	0	0	1	0	6	0
Ayrshire	1	1	0	0	0	0	2	0
Berwickshire	0	1	0	0	0	0	1	0
Caithness	0	0	0	1	0	0	1	0
Dumfries and Galloway	0	11	2	0	1	0	12	2
Fife	1	0	0	0	0	0	1	0
Lanarkshire	0	0	0	0	1	0	1	0
Orkney	0	0	0	1	0	0	1	0
Perthshire	1	0	0	2	0	0	3	0
								0
Total for Scotland	5	19	3	4	4	0	32	3

<sup>1</sup> The local authority areas recorded above show the location of the animals when tested.

<sup>2</sup> All positive cases in 2012 related to livestock imported into Scotland from areas where SBV was present.
